CHIVALRY arose out of the feudal system in the latter part of the 8th century (*chevalier*, or knight, being derived from the *caballarius*, the equipped feudal tenant on horseback) From the 12th to the 15th century it tended to refine manners The knight swore to accomplish the duties of his profession, as the champion of God and the ladies, to speak the truth, to maintain the right, to protect the distressed, to practise courtesy, to fulfil obligations, and to vindicate in every perilous adventure his honour and character Chivalry expired with the feudal system See *Knighthood* and *Tournaments* By letters patent of James I the earl-marshal of England had "the like jurisdiction in the *courts of chivalry*, when the office of lord high constable was vacant, as this latter and the marshal did jointly exercise," 1623.

CHLORAL HYDRATE, a crystalline compound of the marsh gas series, discovered by Liebig in 1831, which, when taken dissolved in water, produces deep sleep, but not insensibility to pain This property was discovered by Oscar Liebreich, and reported to the French Academy of Sciences, 16 Aug 1869 Its use requires great caution, particularly if weakness of the heart is suspected The lamented death of prof John Tyndall was caused by an overdose of chloral given by mistake for sulphate of magnesia, 4 Dec 1893

CHLORALUM, or *chloride of alumina*, a compound of chlorine and alumina, an antiseptic disinfectant, invented by Dr Gamgee about 1870 It is safe and efficacious, and useful in medicine for gargles, washing wounds, &c

CHLORINE (Greek *chloros*, pale green), a gas first obtained by Scheele in 1774, by treating manganese with muriatic (hydrochloric) acid Sir H Davy, in 1810, stated this gas to be an element, and named it chlorine Combined with sodium it forms common salt (chloride of sodium), and combined with lime it forms the bleaching powder and disinfectant, chloride of lime, see *Bleaching* In 1823 Faraday condensed chlorine into a liquid

The supposed dissociation of oxygen from chlorine by heat by V and H Meyer of Zurich, was announced Aug 1879 Afterwards chlorine was proved to exist in two similar states at high temperatures

CHLOROFORM (the ter-chloride of the hypothetical radical formyl) is a compound of carbon, hydrogen, and chlorine, and was made from alcohol, water, and bleaching powder It was discovered by Soubeiran in 1831, and independently by Liebig in 1832, and its composition was determined by Dumas in 1834 Chloroform was first applied as an anæsthetic experimentally by Mr Jacob Bell in London, in Feb, and dr Simpson of Edinburgh in Nov 1847 Its jubilee was celebrated by the society of Anæsthetists, 18 Nov 1897, and was administered in England on 14 Dec 1848, by Mr James Robinson, surgeon-dentist A committee of the Royal Medical and Chirurgical Society in July, 1864, after examining statistics, reported that the use of anæsthetics had in no degree increased the rate of mortality

By the invitation of the Nizam through the *Lancet*, Dr Lauder Brunton arrived at Hyderabad, 22 Oct, 1889, and there with other medical men investigated experimentally on the peculiar action of chloroform They came to the conclusion that the danger of its use was not specially due to its effect upon the heart, but upon respiration, which could be easily obviated by proper caution The Nizam remitted 1,000*l* for the expenses of the commission *Lancet* Jan March, 1890

The privilege was restricted by Henry VII in 1489, and abolished with respect to murderers and other great criminals by Henry VIII, 1512 *Stow*

COAL * It is contended, with much seeming truth, that coal, although not mentioned by the Romans in their notices of Britain, was yet in use by the ancient Britons *Brandt* Henry III is said to have granted a licence to dig coals near Newcastle-upon-Tyne in 1234, some say earlier, and others in 1239 Sea-coal was prohibited from being used in and near London, as being "prejudicial to human health," and even smiths were obliged to burn wood, 1273 *Stow* In 1306 the gentry petitioned against its use Coal was first made an article of trade from Newcastle to London, 4 Rich II 1381 *Rymer's Fœdera* Notwithstanding the many previous complaints against coal as a public nuisance, it was at length generally burned in London in 1400, but it was not in common use in England until the reign of Charles I 1625 Coal was brought from Dublin to Newry in 1742 Coal declared a contraband of war by Great Britain, April, 1898

COLLEGES, from the Latin *collegium*, assemblages of persons for some specific study or purpose In Roman law the term corresponded to our word corporation, but the English word college has become chiefly identified with purposes of training or study University education preceded the erection of colleges, which were foundations to relieve the students from the expense of living at lodging-houses and at inns On the Continent collegiate or academic degrees are said to have been first conferred at the University of Paris, 1140, but some authorities say not before 1215 In England it is contended that the date is much earlier, and some hold that Bede obtained a degree formally at Cambridge, and John de Beverley at Oxford, and that they were the first doctors of these universities Many of the older public schools contain the word college as part of their formal title, and many more modern establishments, which are, strictly speaking, schools rather than colleges have adopted the same title See *Education*, and also *Universities*, *Schools Oxford*, *Cambridge*, *Law*, *Medicine*, *Science*, *Women's*, *Military*, *Naval Music*, *Agriculture*, *Technical*, *Veterinary Theological*, *Heraldry*, *Preceptors*, *Secondary Education*

COLONIES The Phœnician and Greek colonies, frequently founded by political exiles, soon became independent of the mother country The Roman colonies, on the contrary, continued in close connection with Rome itself, being governed almost entirely by military law —The COLONIES OF GREAT BRITAIN partake of both these characters The N American colonies revolted in consequence of the attempt at taxation without their consent in 1764 The loyal condition of the present colonies now is due to the gradual relaxation of the pressure of the home government The population of the British colonies in all parts of the world was estimated, in 1861, at 142,952,243, in 1888, 275 520,216, in 1902 400,000,000, in 1904, 410,000,000. COMETS (Greek *come*, a hair) See *Astron Soc* Mr Hind, in his little work on comets, gave a chronological list (1852) The identity and periodicity of comets are considered in Mr G F Chambers' Handbook of Astronomy, 1889 90, and in Mr W T Lynn's "Remarkable Comets," 10th edition, 1902 Amédée Guillemin's "World of Comets," by J Glaisher, published 1877 Sir Wm Ball's "In the Starry Realm," 1892, and Lynn's "Remarkable Comets," 1889 The spectrum analysis of Donati (1864), Dr Wm Huggins, and Dr William Allen Miller in 1866 *et seq*, and others, indicate in comets the presence of gaseous matter in a state of incandescence, giving spectra, chiefly composed of bright bands due to hydrocarbons The comet of Sept 1882 showed spectra also of iron and sodium There are 11 periodic comets of which the return has been observed, 1905

HALLEY'S COMET, 1682 Named after one of the greatest astronomers of England He first proved that many of the appearances of comets were but the periodical returns of the same bodies, and he demonstrated that the comet of 1682 was the same with the comet of 1456, 1531, and 1607, deducing this fact from a minute observation of the first mentioned comet, and being struck by its wonderful resemblance to the comets described as having appeared in those years Halley, therefore, first fixed the identity of comets, and predicted their periodical returns. *Vince's Astronomy* The revolution of Halley's comet is performed in about 75 years, it appeared (as he had predicted) in 1758 and came to its perihelion on March 13 its last appearance was 1835, its next will be 1910

The computed length of that which appeared in 1811, and which was so remarkably conspicuous, was on 15 Oct, according to the late Dr Herschel upwards of 100,000,000 miles, and its apparent greatest breadth at the same time 15,000,000 miles It was visible all the autumn to the naked eye *Philos Trans Royal Soc* for 1812 Another comet, Dec 1823

COMMUNALISTS, or COMMUNISTS, propose to divide France into about a thousand small thoroughly independent states, with councils elected by all the population, Paris to be the ruling head They declare that capital and its holders must be adapted to nobler uses, or cease to exist Their creed is stated to be atheism and materialism They are intimately connected with the International Society of workmen (see *Workmen*), and with the communists or socialists (1871 3) †

COMMUNES, in France, are territorial divisions under a mayor In the 11th century the name was given to combinations of citizens, favoured by the crown, against the exactions of the nobles In 1356 Stephen Marcel, during the English invasion, vainly endeavoured to establish a confederation of sovereign cities, having Paris as the governing head, and for six months it was really governed by a commune in 1588 After the insurrection of July, 1789, the revolutionary committee which replaced the city council took the name of "commune of Paris" Pethion being mayor It met at the Hotel de Ville, and was definitively constituted, 21 May, 1791 It had great power under Robespierre, and fell with him 17 July, 1794, being replaced by twelve municipalities The commune of Paris was proclaimed 28 March, 1871, during the insurrection, which began 18 March and ended with the capture of the city by the government troops, 28 May following 2245 communists were pardoned by decree issued 17 Jan 1879, and many others afterwards A number re-entered Paris, 4 September following For the events of the communal rule in Paris, see *France*, 1871 Louise Michel, "Red Virgin," died 1905 See *Socialism*

COMMUNION, a name given to the ordinance of the Lord's Supper, 1 *Cor* x 16 Communicating under the form of bread alone is said to have had its rise in the west, under pope Urban II , 1096 The cup was first denied to the laity by the council of Constance, 1414-18 The fourth Lateran council, 1215, decreed that every believer should receive the communion at least at Easter The communion service of the church of England was set forth in 1549

COMPANIES * The London trade companies were gradually formed out of the trade or craft guilds, mainly by the exertions of Walter Harvey, mayor, in 1272, who is said to have been very active in enlarging and maintaining the liberties and privileges of the city The original religious element in the companies gradually disappeared Among the earliest commercial companies in England may be named the Steelyard society, established 1232 The second company was the merchants of St Thomas a Becket, in 1248 *Stow* The Merchant Adventurers, incorporated by Elizabeth, 1564 Mr Edward Arnold's *Early Chartered Companies*, published July, 1896 The following are the city companies of London, the first twelve are the chief, and are styled "the honourable" Many companies are extinct, and many dates are doubtful An inquiry into their affairs was partially resisted by them in 1835 In 1869 the gross income of the endowed charities of the city companies was stated to be above 99 000*l* A motion in the commons for inquiry into the revenues and other affairs of 89 companies, by Mr W H James, withdrawn, 23 May, 1876 A commission of inquiry was appointed (the earl of Derby, duke of Bedford, lords Coleridge and Sherbrooke, sir R A Cross, &c), 14 July, 1880 Five reports issued with recommendations for reform, 1884-5

In 1884, 7319 liverymen and about 10,000 freemen, estimated annual income about 750 000*l*, expended in maintenance, education, and charities about 75,000*l* spent in entertainments

Grants from the companies to the City Guilds of London Institute —Goldsmiths 46 000*l* ;Drapers 43,000*l*, Clothworkers 37 000*l*, Fishmongers 34,000*l*, Mercers 22 000*l*, Grocers 10 000*l* for technical education, &c — (Drapers 60 000*l*, Goldsmiths 85,000*l*, Mercers 60,000*l* and others promised, 1878 88

* By this oath they swore to be true and faithful to the Commonwealth without king or house of lords The statues of Charles were next day demolished particularly that at the Royal Exchange and one at the west end of St Paul's and in their room the following inscription was conspicuously set up — *Exit Tyrannus Regum ultimus Anno Libertatis Anglia Restituta Primo Anno Dom* 1648, Jan 30

† M Dufaure, in opposing the amnesty 17 May 1876 asserted that the outbreak was organised by about 7000 communists and 1500 foreigners 40 000 persons were inculpated, 10,000 tried, 25,000 dismissed See *France*

* Bubble companies have been formed, commonly by designing persons Law's bubble in 1720 1, was perhaps the most extraordinary of its kind and the *South Sea Bubble* in the same year was scarcely less memorable for its ruin of thousands of families Many companies were established in these countries in 1824 and 1825 and turned out to be *bubbles* Immense losses were incurred by individuals and the families of thousands of speculators were totally ruined Many railway enterprises (1844 5) were termed *bubbles* Lord chief justice Russell stated that from 1891-7 over 28 millions sterling had been lost to the community in connection with dishonest company promotions, 9 Nov 1898 See *Law's Bubble*, *South Sea*, *Railways*, *Joint Stock Companies*

Phrenology was refuted by Lord Jeffrey in the *Edinburgh Review*, in 1826, and more recently by Dr W B Carpenter Professor David Ferrier reported the results of researches tending to prove localisation of certain faculties in the brain to the British Association, Sept 1873 He published his work "The Functions of the Brain, 1876, 2nd edition 1887

CREDIT FONCIER, &c A plan of providing loans to landowners was introduced by Frederick the Great of Prussia, in 1763, in some of the Prussian provinces, as the best method of alleviating the distresses of the landed interest caused by his wars. CUSTOM is a law not written (*lex non scripta*), established by long usage and consent, and is distinguished from *lex scripta*, or the written law It is the rule of law when it is derived from 1189 downwards Sixty years' custom is binding in the civil law, and forty years' in ecclesiastical cases

CUSTOMS were collected upon merchandise in England, under Ethelred II in 979 The king's claim to them by grant of parliament was established 3 Edw I 1274 The customs were farmed to sir Thomas Smith for annual sums varying from 14,000*l* to 50,000*l* in the reign of Elizabeth *Stow* They were farmed by Charles II for 390,000*l* in 1666 *Davenant* In 1671 commissioners were appointed The customs were consolidated by Mr Pitt in 1787 Between 1820 and 1830 so many reductions and consolidations were made in the customs department, that above a quarter of a million was saved in salaries, though the work had enormously increased —Acts consolidating the customs duties were passed in 1853, 1854, and 1860, whereby the number of articles in the tariff and the amount of the customs were greatly reduced Many changes have been made since by the Customs Act of 1890, the laws were amended and the duties modified, see *Revenue* The disqualification of custom-house officers and officers of excise from voting for the election of members of parliament in 1782, was removed in 1867–8

The laws respecting the customs were amended by an act passed 21 Aug 1871, and consolidated by acts passed, 24 July, 1876, an ended, 1887 and 1898

CYCLE AND CYCLING The origin of the cycle is unknown Velocipedes or manumotive machines with three or more wheels were occasionally in use, one of the earliest being the invention of Richard Lovell Edgworth, *circa* 1767 A machine of this kind was invented by Blanchard, the aeronaut, and is described in the *Journal de Paris*, 27 July, 1779 and one was invented by Niepce in 1818 The "dandy-horse," or "Draisena," a kind of bicycle, was patented for the Baron von Drais in Paris and London in 1818, and is described in "Ackermann's Repository," Feb, 1819 It consisted of two wheels, about 30 in in diameter, running one in the wake of the other and connected by a beam of wood, upon which, half way from each end was a saddle or perch, an arm rest at the fore end of the beam completed the apparatus It was propelled by kicking the ground with the right and left foot alternately It fell into disuse in consequence of the satire of Cruikshank, and contemporary humorists The first practical bicycle, furnished with cranks and levers, is said to have been invented by Kirkpatrick Macmillan, a blacksmith of Keir, Dumfriesshire, *circa* 1840, another is stated to have been made by Garvin Dalzell, who called it "wooden horse," *circa* 1846 M Michaux, of Paris, invented pedals to propel the front wheel, and introduced the bicycle proper in 1866, from France it was imported into England about 1868 James Starley, a mechanic, of Albourne, Sussex, transformed the old-fashioned "bone-shaker" into the modern bicycle and tricycle The "Otto" bicycle was patented in 1881, many other machines with various improvements since that date A great impetus was given to the use of the bicycle by the invention of the safety bicycle, by J Kemp Starley (died 29 Oct, 1901), now in universal use, and the invention

of the pneumatic tyre and the "free" wheel The motor cycle, introduced about 1900, is much in vogue (1905)

INFLAMMABILITY OF DIAMONDS

Boetius de Boot conjectured that the diamond was inflammable, 1609 When exposed to a high temperature it gave an acrid vapour, in which a part of it was dissipated, 1673 *Boyle*

Sir Isaac Newton concluded from its great refracting power, that it must be combustible, 1675

Averani demonstrated, by concentrating the rays of the sun upon it, that the diamond was exhaled in vapour, and entirely disappeared, while other precious stones merely grow softer, 1695

It has been ascertained by Guyton, Davy, and others, that diamonds contain nothing but pure charcoal, or carbon Diamonds were charred by the intense heat of the voltaic battery—by M Dumas in Paris, and by professor Faraday, in London, in 1848

DOCETÆ, a sect of the 1st century, said to have held that Jesus Christ was God, but that his body was an appearance, not a reality

DOCKS There are several kinds of docks, of which the chief are wet, which afford facilities for loading and unloading vessels, dry or graving, for the inspection and repair of ships, and floating for the same purposes Wet docks are of two kinds—those in which the water is always maintained at about the same level by means of land streams or pumping, and these are the most convenient, and those known as tidal, where during the ebb of the tide the ships practically rest upon the mud The first dock in England was constructed at Liverpool in 1708, whilst the first in London was for the accommodation of whaling vessels from Greenland, and which afforded facilities for boiling or "trying-out" blubber During the last century the immense development of the world's trade and the building of ships of enormous size and carrying capacity, necessitated improvements in the facilities for dealing with ocean traffic, and, as a result, old docks were enlarged and new ones constructed Tidal docks were deepened by dredging and deeper water was provided at the quays In the United Kingdom the principal docks are at London, Cardiff, Liverpool, Birkenhead, Newcastle, Bristol, Manchester (opened up to ocean traffic by means of the ship canal see *Manchester*), Dover, Grimsby, North and South Shields, Glasgow, Hull, the Hartlepools Aberdeen, Southampton, Plymouth, Cork, Dundee, Newport (Mon), Dublin, Swansea, Middlesbrough, Portsmouth, Greenock, Barry, and Leith London is the largest port in the world, but a scheme promoted in 1905, when carried out, will give Antwerp that title A royal commission was appointed in 1900 to inquire into the administration of the Port of London (see *London* and other places named) Floating docks save much time in the inspection and repair of damaged vessels The docks, by means of a series of chambers into which water is allowed to flow, are sunk beneath the vessel to be repaired, the water is pumped out, and the dock rises to the surface again with the ship upon its deck The principal London docks are as follows —

In the evening the steamer arrived on the French coast, and the wire was run up the cliff at Cape Grisnez to its terminal station, and messages were sent to and fro between England and the French coast But the wire, in settling into the sea bottom, crossed a rocky ridge, and snapped in two, and thus the enterprise for that time failed

A committee of the House of Commons appointed "to consider whether it is desirable to authorize municipal corporations or other local authorities to adopt any schemes for lighting by electricity" (Dr Lyon Playfair, chairman), reports "The energy of one horse power may be converted into gaslight, and yields a luminosity equal to 12 candle power But the same amount of energy transformed into electric light produces 1,600-candle power Scientific witnesses considered that in the future the electric current might be extensively used to transmit power as well as light to considerable distances, so that the power applied to mechanical purposes during the day might be made available for light during the night. There seems to be no reason to doubt that the electric light has established itself for lighthouse illumination, and is fitted to illumine large symmetrical places, such as squares, public halls, railway stations, and workshops Compared

with gas, the economy for equal illumination does not yet appear to be conclusively established

Gas companies, in the opinion of your committee, have no special claims to be considered as the future distributors of electric light

Your committee, however, do not consider that the time has yet arrived to give general powers to private electric companies to break up the streets, unless by consent of the local authorities' — *Times* 19 June, 1880

ELEMENTS were formerly reckoned as four earth, air, fire and water Lavoisier enunciated the principle that all bodies which cannot be proved to be compounded are elements, and to be treated as such Mr W Crookes (knt 1897), F R S , in a lecture at the Royal Institution, London, by delicate experiments demonstrated that yttrium is a compound body, and expounded a theory that all the elements have been evolved from what he termed *Protyle*, 18 Feb 1887 Above twelve new elements said to have been discovered in rare earths by MM Krüss and Nilson by the spectroscope in 1887 Mr Crookes declared Didymium to be a compound body See *Table*, and separate articles The chemical elements were stated to be about 54 in 1834, about 77 in 1881, about 80, 1903 *

Letter from the queen to the empire —
(*London Gazette 2 Feb*)
"OSBORNE, *January* 26, 1892

'I must once again give expression to my deep sense of the loyalty and affectionate sympathy evinced by my subjects in every part of my empire on an occasion more sad and tragical than any but one which has befallen me and mine as well as the nation The overwhelming misfortune of my dearly loved grandson having been thus suddenly cut off in the flower of his age, full of promise for the future, amiable and gentle, and endearing himself to all, renders it hard for his sorely stricken parents, his dear young bride and his fond grandmother to bow in submission to the inscrutable decrees of Providence

"The sympathy of millions which has been so touchingly and visibly expressed, is deeply gratifying at such a time and I wish, both in my own name and that of my children, to express from my heart, my warm gratitude to *all*

"These testimonies of sympathy with us, and appreciation of my dear grandson whom I loved as a son, and whose devotion to me was as great as that of a son, will be a help and consolation to me and mine in our affliction

"My bereavements during the last thirty years of my reign have indeed been heavy Though the labours, anxieties, and responsibilities inseparable from my position have been great, yet it is my earnest prayer that God may continue to give me health and strength to work for the good and happiness of my dear Country and Empire while life lasts "VICTORIA, R I

EXCISE The system was established in England by the Long Parliament in 1643, duties being levied on wines, beer, &c, and tobacco, to support the army against Charles I It was continued under Charles II Sir Robert Walpole's plan for extending the excise and introducing the bonding system was withdrawn through vehement opposition in 1733 Farming the excise duties led to many evils, see *Smugglers* *Bonded warehouses* for the temporary storage of exciseable goods, authorised in 1802, were begun in 1823 The system was modified in 1882 Bonds for the payment of the duties are entered into by the importers The old excise office was built on the site of Gresham college in 1774, the present is at Somerset-house The officers of excise and customs were deprived of their votes for returning members to parliament in 1782, but received them again in 1868 In 1849 the boards of excise, stamps and taxes, were united, as "*the board of commissioners of inland revenue*" Notwithstanding the abolition of the excise duty upon numerous articles, and the reduction of duty upon various others, of late years, the total excise revenue, so far from having decreased, has progressively advanced (1847 and 1861 excepted) in its aggregate annual amount Additional excise duties were charged by 17 & 18 Vict c 27, July 3, 1854 The excise duties were further modified in 1860–94, see *Revenue*

FLUORINE, a gaseous element, obtained from fluor spar, first collected over mercury by Priestley Its property of corroding all vessels is so great that it is separated with great difficulty It was named by Ampere in 1810 Its chemical history was further elucidated by Davy (1809), Berzelius (1824), and succeeding chemists The corroding property of fluoric acid was employed in the arts in 1760, by Schwankhard of Nuremberg *Gmelin*

FLYING, ARTIFICIAL In Greek mythology, Dædalus is said to have attached wings of wax to the body of his son Icarus, who, neglecting the advice of his father, flew so high that the sun melted his wings, and he fell into the Icarian sea Archytas is said to have made a flying dove, about 400 B C Friar Bacon maintained the possibility of the art of flying, and predicted it would be a general practice, 1273 Bishop Wilkins says (1651), it will yet be as usual to hear a man call for his *wings* when he is going on a journey, as it is now to hear him call for his boots! Borelli (about 1670) showed the futility of these speculations About 1800 sir George Cayley experimented on the subject, and in 1843 Mr Henson invented a flying machine, but nothing has been devised capable of serving a practical purpose The motion of birds in relation to aëronautics was much discussed by scientific men in 1867-8, and since At a meeting of the Aeronautical society, 26 March, 1868, it was stated that a member had actually, by his muscular force, aided by apparatus, risen from the ground and flown horizontally Dr James Pettigrew published his elaborate researches on flying, 1867-71 M Von Groof, a Belgian, "the flying-man," descended from a balloon by means of a parachute resembling wings, in 1874, but was killed by falling through failure of his apparatus at Chelsea, 9 July, 1874

FRANCONIA, or **FRANKENLAND** (on the Maine), formerly a circle of the German empire, part of Thuringia, was conquered by Thierry, king of the Franks, 530, and colonized Its count or duke, Conrad, was elected king of Germany, 8 Nov 911, and his descendant was the emperor Conrad III, elected 1138, and another duke Franconia was made a distinct circle from Thuringia in 1512 At its subdivision in 1806 various German princes obtained a part, but in 1814 the largest share was awarded to Bavaria

FRANCO-PRUSSIAN WAR originated in the emperor of the French's jealousy of the greatly increased power of Prussia, through the successful issue of the war with Denmark in 1864, and with Austria in 1866 The German Confederation was thereby annulled, and the North German Confederation established under the supremacy of the king of Prussia, to whose territories were further annexed Hanover, Hesse-Cassel, Nassau, Frankfort, and other provinces This great augmentation of the power of Prussia was mainly due to the energetic policy of count Bismarck-Schönhausen, prime minister since Sept 1862

In a draft treaty, secretly proposed to the Prussian government by the French emperor in 1866 "1 The emperor recognises the acquisitions which Prussia has made in the last war 2 The king of Prussia promises to facilitate the acquisition of Luxemburg by France 3 The emperor will not oppose a federal union of the northern and southern states of Germany, excluding Austria 4. The king of Prussia, in case the emperor should enter or conquer Belgium, will support him in arms against any opposing power 5 They enter into an alliance offensive and defensive

[This draft treaty count Bismarck asserted emanated entirely from the French emperor The scheme had never been seriously entertained by himself]

In March, 1867, a dispute arose through the French emperor's proposal for purchasing Luxemburg from the king of Holland, which was strongly opposed by Prussia, as that province had formed part of the dissolved Germanic Confederation and the affair was only settled by a conference of the representatives of the great powers in London at which the perfect neutrality of Luxemburg was determined, together with the withdrawal of the Prussian garrison and the destruction of the fortifications 7 11 May, 1867

Prince Leopold of Hohenzollern Sigmaringen (connected with the Prussian dynasty, and brother of Charles, prince of Roumania), consented to become a candidate for the throne of Spain, 4 July, 18 ,o

This was denounced by the French government. 1870
Threatening speeches were made in the French chamber by the duc de Grammont, the foreign minister, and eventually, after some negotiation and the intervention of Great Britain prince Leopold, with the consent of his sovereign, declined the proffered crown 12 July, ,,

The submission did not satisfy the French government and nation, and the demand for a guarantee against the repetition of such an acceptance irritated the Prussian government and led to the termination of the negotiations, the king refusing to receive the count Benedetti, the French minister 13 July, ,,

Energetic but fruitless efforts to avert the war were made by earl Granville, the British foreign minister about 15 July, ,,

War was announced by the French emperor with the hearty consent of the great majority of the chambers The left or republican party opposed the war M Thiers and a few others only protested against it as premature 15 July ,,

[After his surrender on 2 Sept the emperor told count Bismarck that he did not desire war, but was driven into it by public opinion He appears to have been greatly deceived as to the numerical strength of his army and its state of preparation]

"The greatest national crime that we have had the pain of recording since the days of the first French revolution has been consummated War is declared—an unjust but premeditated war —*Times* 16 July 1870

(*For details of the battles see separate articles*)

FRENCH ARMY, about 300 000 —

4th corps, under general Ladmirault
5th corps under general De Failly

2 Right under prince Frederick Charles, about 180 000
3 Centre, under generals Von Bittenfeld and Von Steinmetz about 80 000
4. The left under the crown prince of Prussia, about 166 000
Commander in chief king William second, general Helmuth Karl Bernhard von Moltke (born 26 Oct, 1800, died 24 April, 1891)

The North German army at the beginning of August, consisted, firstly of 550 000 line, with 1,200 guns and 53,000 cavalry secondly of 187 000 reserve, with 234 guns and 18 000 cavalry and thirdly of 205 000 landwehr or militia, with 10,000 cavalry, making a grand total of 944 000 men with 1,680 mobilised guns and 103 000 horses

To these must be added, firstly the Bavarians, 69,000 line with 192 guns and 14 800 horses—25,000 reserve with 2 400 horses, and 22,000 landwehr secondly, the Wurtembergers—22 000 line with 54 guns and 6,200 horses, 6,500 reserve, and 6 000 landwehr, and, thirdly, the Badenese—16 000 line with 54 guns, 4,000 reserve, and 0,600 landwehr

All the German troops taken together as under arms in Aug 1870, 1 124 000 men

Four weeks previously, on the peace footing, they numbered only 360,000

The French generals appear to have acted greatly upon impulse The Germans seem to have been invariably guided by a well matured plan, their tactics mainly consisting in bringing vast masses to bear on the point where they were anxious to prevail. From Saarbrück to Sedan, Moltke appears to have left nothing to chance and all his arrangements were ably carried out

The causes of the early ruin of the French army were "1, the enormous superiority of the Germans in regard to numbers, 2, the absolute unity of their command and concert of operation 3, their superior mechanism

in equipment and supplies, 4, the superior intelligence, steadiness and discipline of the soldiers, 5, superior education of the officers, and the dash and intelligence of the cavalry —*Quarterly Review*

FROISSART'S CHRONICLE, a history of the period between 1326 and 1400, treating chiefly of contemporary events in France, England, Scotland and Flanders, which are described in a vivid and interesting manner, with valuable information also on Spain, Italy and Germany. The first part of the Chronicle, the period 1326-56, is based on the writings of Jean le Bel, canon of Liege. Froissart (1327-1410), whose life was one of travel and adventure, was educated for and took orders in the church, but his inclination for poetry and gallantry led him to a roving life. He visited England in 1360, where his reputation of being a gay poet and narrator of chivalric deeds had preceded him, and became secretary to queen Philippa of Hainault, wife of Edward III., a post he held for some years, he revisited England in 1395, and spent some time at the court of Richard II. Among his various patrons was Wenceslaus duke of Brabant, whose poems, with certain pieces of his own, Froissart collected under the title of "Meliador, or the Knight of the Golden Sun," this work was discovered in 1894. On the death of his patron, he entered the service of Guy, count of Blois, who presented him with the canonry of Chimay. About 1388 Froissart visited the comte de Foix, of whose court he gives a delightful description. He died at Chimay 1410. The earliest translation of the Chronicle is that of sir John Bourchier, lord Berners, 1525, Buchon edited the Chronicle, 1824-26, Johnes, 1803-5, and Luce 1869-88.

GARDEN CITIES are designed to provide settlements for workpeople and others in healthy and open neighbourhoods where every hygienic safeguard is applied to the aggregation of an industrial population, so controlled that rural conditions may be associated with many of the conveniences of urban life The earliest attempt to give practical effect to the idea was the foundation, in 1890, of the model village of Port Sunlight, on the Mersey, by Messrs Lever Bros In 1891 Mr George Cadbury placed in trust an estate at Bournville, near Birmingham, for the benefit of future residents, and his own employés, for the erection of dwellings on the principle of building societies, a proviso being made that a certain area of land should be kept clear around each house in perpetuity Mr Ebenezer Howard first introduced the scheme for founding garden cities in his book, "To-Morrow," published in 1898 In 1889 the Garden City Association was formed, followed by the Garden City Pioneer Company, Ltd, in 1902, with a nominal capital of 20,000*l*, Mr Cadbury, Mr Alfred Harmsworth (now baron Northcliffe), and Mr H W Lever being among the first subscribers This company was the pioneer of a larger undertaking, the Garden City Company, formed September, 1903, with a capital of 30,000*l* An estate near Hitchen, of 3,818 acres, was secured at the cost of about 40*l* per acre There are two villages on the estate, and roads, water, and drainage works, gas works, and a railway station have been constructed, postal, banking, and other facilities have also been secured, and some 200 houses and cottages have already (1905) been erected Several large manufacturers have selected sites for the erection of workmen's cottages on the removal of their works to the Garden City *L'Association des Cités-Jardins de France*, on similar lines, was founded in France in 1904

GENEVA CONVENTION, for the succour of the wounded in time of active warfare Having been a witness of the horrors of the battle-field of Solferino, 24 June, 1859, M Henri Dunant, a Swiss, published his experiences, which induced the *Societé Genevoise d'Utilite Publique* in Feb 1863 to discuss the question whether relief societies might not be formed in time of peace to help the wounded in time of war by means of qualified volunteers At an international conference held 26 Oct 1863, fourteen governments, including Great Britain, France, Austria, Prussia, Italy, and Russia, were represented by delegates The propositions then drawn up were accepted as an international code by a congress which met at Geneva, 8 Aug 1864, and on 22 Aug a convention was signed by twelve of the delegates, and it was eventually adopted by all civilised powers except the United States International conferences were held at Paris in 1867 and at Berlin in 1869 for further developing in a practical manner the objects of the Geneva conference The International Society (termed "the Red Cross Society"), established in consequence of these proceedings, was very energetic in relieving the wounded and sick during the Franco-Prussian war in 1870, its flag being recognised as neutral See *Aid to*

GEOLOGY, the science of the earth, is said to have been cultivated in China before the Christian era, and occupied the attention of Aristotle, Theophrastus, Pliny, Avicenna, and the Arabian writers

In 1574 Mercati wrote concerning the fossils in the pope's museum Cesalpino Majoli, and others (1597), Steno (1669), Scilla (1670), Quirini (1676), Plot and Lister (1678), Leibnitz (1680) recorded observations, and put forth theories on the various changes in the crust of the earth

Hooke (1668), in his work on Earthquakes, said that fossils, "as monuments of nature, were more certain tokens of antiquity than coins or medals, and though difficult, it would not be impossible *to raise a chronology out of them*"

Burnet's 'Theory of the Earth" appeared 1690, Whiston's 1696, Hutton's "Theory of the Earth' 1795

Buffon's geological views (1749) were censured by the Sorbonne in 1751, and recanted in consequence The principle he renounced was that the present condition of the earth is due to secondary causes, and that these same causes will produce further changes His more eminent fellow labourers and successors were Gesner (1758), Michell (1760), Raspe (1762 73), Pallas and Horace B de Saussure (1793 1800)

Werner (1775) ascribed all rocks to an *aqueous* origin, and even denied the existence of volcanoes in primitive geological times, and had many followers, Kirwan, De Luc, &c.—James Hutton (1788), supported by Playfair, (1801) warmly opposed Werner's views, and asserted that the principal changes in the earth's crust are due to the energy of *fire* The rival parties were hence termed Neptunists and Vulcanists

Mr (aft sir) A. Geikie and other eminent modern geologists, ascribed the origin of the landscape features of the earth chiefly to denudation by the action of water, 1865 *et seq*, Sir A Geikie's "Founders of Geology [Jean Etienne Guettard, Desmaret, and others in the 18th century], published 1897

William Smith, the father of British geology (who had walked over a large part of England), drew up a Tabular View of British Strata, in 1799, and published it and his Geological Map of England and Wales, 1812 15 died 28 Aug 1839 The Rev Adam Sedgwick, another father, died 27 Jan 1873, aged 87 Sir Charles Lyell, died 22 Feb 1875

The rev Wm Buckland, D D, born 1784, Reader in geology, Oxford, 1818, published "Reliquiæ Diluvianæ," the results of his examination of the fossil bones of large mammals, elephants, tigers, hyenas, &c, discovered in the Kirkdale cave, Pickering, Yorkshire, in 1821 "Geology and Mineralogy,' in relation to natural Theology (Bridgewater Treatise), 1836 Dean of Westminster, 1846, died Aug 1856

In 1803 the Royal Institution possessed the best geological collection in London, collected by H Davy, C Hatchett and others the proposal of sir John St Aubyn, sir Abraham Hume, and the right hon. C F Greville, to aid the government in establishing a school of mines there in 1804 7, was declined, 13 Nov 1807

In 1807 the *Geological Society of London* was established By collecting a great mass of new facts, it greatly tended to check the disposition to theorise, and led to the introduction of views midway between those of Werner and Hutton

The Geological Society of Dublin, 1832 of Edinburgh, 1834 of France, 1830, of Germany, 1848

In 1835 Mr (afterwards sir Henry) De la Beche suggested the establishment of the present *Museum of Geology*, which began at Craig's court, and which was removed to its present position in Jermyn street To him are also due the valuable geological maps formed on the ordnance survey The building was erected by Mr Pennethorne, and formally opened by the prince consort 14 May, 1851 Attached to the Museum are the Mining Records office, a lecture theatre, laboratories, &c Sir H De la Beche, the first director, died 13 April, 1855 succeeded by sir Roderick Murchison, who died 22 Oct 1871 succeeded by professor (after wards sir) A C Ramsay, March, 1872, died 9 Dec 1891, by Archibald Geikie, 1881, knt., 1891 A similar institution founded at Calcutta in 1840

A great many maps have been published, with memoirs The survey of England, on the scale of an inch to a mile, was completed in Jan 1884 Some maps have been made on a scale of six inches to a mile The surveys of Scotland and Ireland are in progress

New geological map of England and Wales, 4 miles to the inch, published by government, 1898

International geological congress originated at the Buffalo meeting of the American association for the advancement of science in 1876

The English standard works on geology at the present time are those of Lyell, Murchison Phillips, De la Beche, Prestwich, Geikie, Dana, Jukes Brown, Green, Judd, Page and Lapworth, Agassiz, Ramsay, and Nicholson

The strata composing the earth's crust may be divided into two great classes

I Those generally attributed to the agency of water,

II. To the action of fire which may be subdivided as follows —
Aqueous formations stratified, rarely crystalline — Sedimentary or fossiliferous rocks
Metamorphic or unfossiliferous
Igneous formations, unstratified, crystalline — Volcanic, as basalt &c
Plutonic, as granite &c
Fossiliferous, or Sedimentary, rocks are divided into three great series —
The Palæozoic (most ancient forms of life) or Primary
The Mesozoic (middle life period) or Secondary
The Neozoic or Cainozoic (more recent forms of life), or Tertiary
